

DIA NoMoFlo LEAK DETECTION KIT

The NoMoFlo kit provides a quick, efficient, and sensitive alternative to the traditional meter clock test. This robust device makes use of proven gas flow measurement technology to detect smaller leaks in less time than previously possible. This device is especially beneficial with meters that have been converted to incorporate automated meter reading modules. The simple and easy to use kit increases customer satisfaction (less call backs) and makes more efficient use of your gas service technicians.

Safety

- Ability to detect smaller leaks more effectively.
- Detects flows as low as 1/8 CFH.
- Light weight anodized aluminum fittings are easy to work with.

Advantages

- Detect leaks in a fraction of the time required by traditional methods.
- Versatility of device can accommodate meter sets in cabinets, under houses, on tiered manifolds as well as applications using curb meters and rotary meters.
- System can be used to check regulator set point and lockup.

Options

- NIST traceable gauge calibration available upon request.
- Kit can be supplied with any size meter connections.

**DIA offers a Refurbishment/Exchange program.
